#	Name	How to Demo	Notes
1	Display a question	Launch the app; display the question and its answer options	Store questions with their types and suitable answers in a suitable data structure
2	Decide whether to use a joker	Present the available jokers to the user	Track jokers if they have been used and if user can use it; Alter the answers according to the joker
3	Select or write an answer	Depending on the question type, retrieve the input from user and indicate it using UI	Only one answer or word can be selected at one time
4	Submit the answer	Lock in the user's answer and compare it with correct answer; Display the result using UI whether answer is correct or not	Indicate whether the selected answer is correct
5	Decide to move on to a harder one or withdraw the money	Present the option to withdraw the current winnings to user and proceed to a harder question if money is not withdrawn	Display the amount of winnings and display the choices of giving up or continuing
6	Track Score	Update the score on each question based on difficulty	Maintain the score as application state
7	Display Final Result	Conclude the game and display the tracked score	Show the amount won
8	Restart Quiz	Give option to Restart the game	Reset all relevant application state
